

Methodology for floating offshore wind turbine major component replacement (MCR)

Webinar to present the main results and outcomes of the FLOWTOM project

12 November 2024
02:00 to 04:00 p.m. (CET)

02:00 - 02:10 p.m.

Introduction (10')

- Welcome word, webinar programme, context and content of the whole project
Laure COSSALTER, France Energies Marines

02:10 - 02:55 p.m.

Basin tests for numerical model validation (45')

- Specification of wave tank tests (20')
Benoit AUGIER, Ifremer
- Validation of numerical model (25')
Tanguy COQUIO, France Energies Marines

02:55 - 03:40 p.m.

Case study: operability definition of MCR steps (45')

- Methodology development and case study specifications (15')
Tanguy COQUIO, France Energies Marines
- Case of transfer of heavy package from a vessel to floating offshore wind turbine (15')
Melissa MAK, EDF
- Case of hub replacement at tower top of a floating offshore wind turbine (15')
Pierre-Alain FREMONT, SBM Offshore

03:40 - 03:55 p.m.

Interactive Q&A session (15')

03:55 - 04:00 p.m.

Conclusion and wrap up (5')

- Take home messages
Laure COSSALTER, France Energies Marines
